DETAILED ACTION

Applicant's arguments filed 20 April 2007 are acknowledged and duly recorded.

Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant invention.

Status of the Claims

Claims 2-6 and 11-13 are pending in the application. Claims 3 and 5 are withdrawn from further consideration. Claims 2,4,6 and 11-13 are pending for examination.

Claim Rejections- 35 USC§103(a) (New Ground of Rejection)

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2,4,6, and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lezdey et al. (PGPUB US 2001/0041684 A1), Henley et al. (6,477,410 B1) in view of Weiner et al (USPN 5,834,014).

Lezdey et al. teach a composition for healing burns and wounds in mammals, which contains a cromolyn compound or the combination of a cromolyn compound and hyaluronic acid a corticosteroid.

Application/Control Number: 10/801,419

Art Unit: 1614

.

A preferred topical composition for use in serious injuries such as burns comprises by weight of the mixture: 0.01% to 1.50% calcium; 0.01% to 0.10% phosphate; 0.01% to 2.00% uric acid, 0.01% to 2.00% urea; 0.02% to 1.50% sodium; 0.01% to 0.10% potassium; 0.01% to 0.70% chloride; 0.001% to 0.01% magnesium; 0.01% to 2.50% hyaluronic acid; and 1.0% to 5.00% of a cromolyn compound (paragraph 16).

Otherwise, an occlusive bandage type of carrier such as vasoline or aquaphor can be used (paragraph 32).

Lezdey et al does not teach a practicing administration of cromolyn compounds indicated for diaper rash or decubitus ulcers.

However, Henley et al teach a representative medicament of cromolyn sodium (column 3, line 19).

Henley et al. teach the treatment for fungal infestations of the skin comprising diaper rash (column 28, line 41).

Henley et al. teach a combination of an electrokinetically delivered substance into a tissue, together with inducing an ultrasonic vibration in the tissue, enables an opening of pores further facilitating penetration of the medicament (column 18, lines 20-27).

Henley et al. does not teach a practicing penetrating agent, i.e., cyclodextrin.

However, Weiner et al. teach cyclodextrin administered with a minoxidil derivative in order to facilitate permeability of said minoxidil agent into the scalp of the patient in need of such treatment (column 5, lines 23 and 38).

Art Unit: 1614

Thus, it would have been prima facie obvious to one of ordinary skill in the art at the time of invention to at once recognize the reasonable expectation of success via the incorporating and the combining together of the inventions of Lezdey, Henley, and Weiner et al.

Lezdey et al. discloses the practicing administration of cromolyn compounds administered topically for variable skin irritations and disorders. Likewise, Henley et al. teach cromolyn sodium and a delivery system, which facilitates skin permeability via electrokinetics. The methods and associated apparatus are different from the those disclosed in instant invention, however, the concept remains constant, in that, there is the element of the facilitation of skin permeability to increase efficacy of a topically applied medicament. Thus, Henley et al. supports the initial motivation to combine with the practicing administration of Lezdey et al. Accordingly, further motivation to combine together is taught in Weiner et al. Weiner et al. describes the penetrating agent, cyclodextrin as being well-known in the art as a facilitator of active agents/medicaments into the stratum corneum of the epidermis. Cyclodextrin is an agent, which could be interchanged with the electronic device of Henley et al. given in conjunction with the practicing medicament cromolyn sodium. Thus, the instant claims are made obvious over the teachings, methods, compositions, and techniques of Lezdey, Henley, and Weiner et al.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Application/Control Number: 10/801,419 Page 5

Art Unit: 1614

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy E. Betton whose telephone number is (571) 272-9922. The examiner can normally be reached on Monday-Friday 8:30a - 5:00p. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ardin H. Marschel can be reached on (571) 272-0718. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
